GitHub: github.com/HP0077

Summary

AI/ML-focused Computer Engineering undergraduate with experience in building end-to-end ML pipelines, AI-powered applications, and real-time systems using Python. Developed projects involving chatbots, predictive modeling, and automation. Passionate about applying AI to solve real-world problems and eager to contribute to hands-on AI experimentation and rapid prototyping.

Education

Bachelor of Engineering – Computer Engineering	2023 – Present
K.C. College of Engineering	CGPA: 9.63 / 10
Higher Secondary Certificate (HSC – Science)	2023
St. Mary High School	75%
Secondary School Certificate (SSC)	2021
New Indian High School	91.20%

Technical Skills

Languages: Python, SQL

Machine Learning: Supervised Learning, Classification, Regression, Random Forest, Decision Trees

Libraries & Frameworks: scikit-learn, pandas, numpy, Flask

Tools: Power BI, Excel, Git

Concepts: Data Preprocessing, Feature Engineering, Model Evaluation, EDA, Prompt Engineering, API Integration

Projects

Planora – AI-Powered Event Orchestration Platform (Ongoing) GitHub

Django, React, DRF, WebSockets, Celery, Redis, SQLite, Groq API, Ollama

- Built a full-stack event management platform enabling real-time collaboration, task tracking, budgeting, and analytics.
- Developed an AI-powered assistant for event summaries, task suggestions, risk mitigation, and automated communication using Groq API with Ollama fallback.
- Implemented WebSocket-based real-time features including chat, file sharing, and live activity updates.
- Designed and integrated automation workflows to streamline event operations, including reporting, content drafting, and dashboard insights.

SafeHeartAI – Heart Disease Prediction System GitHub

Machine Learning — Python, Flask, scikit-learn

- Built an end-to-end ML pipeline to predict heart disease risk using clinical patient data.
- Trained and optimized a Random Forest model on the Framingham dataset (**3,648 records, 15 features**).
- Applied data preprocessing, missing value imputation, and feature selection techniques.
- Achieved **80–85% accuracy** on validation dataset.
- Deployed the model as a web application for real-time classification (**High Risk / Low Risk**).

FITNESS FUSION – Health & Wellbeing Platform GitHub

Web Development — PHP, HTML, CSS, JavaScript

- Developed a responsive health platform focused on fitness tracking and wellness guidance.
- Implemented interactive self-assessment tools and health-related quizzes.
- Designed user-friendly UI ensuring smooth navigation across devices.

Experience

EDA Intern Dec 2025 – Jan 2026

Imarticus Learning

- Performed exploratory data analysis using Python, SQL, and Power BI on real-world datasets.
- Applied data cleaning, transformation, and visualization techniques to derive actionable insights.
- Built dashboards to visualize trends and support data-driven decision-making.

Certifications

- **IBM Generative AI Engineering Professional Certificate** — Coursera (**Ongoing**)
- **AWS Academy Machine Learning Foundations** — Amazon Web Services (**Jun 2025**)
- **Python Data Structures & Algorithms** — Udemy (**Sep 2024**)
